Title (EN):

Monitoring of maternal mortality in Slovenia

Abstract description (EN):

Maternal deaths are not notifiable in Slovenia, therefore we use multiple methods to identify them and avoid case misclassification and underestimation of maternal mortality. Identification of pregnancy-associated deaths is based on the manual revision of death certificates and the computer-based linkage of available databases. Subsequently, all identified pregnancy-associated deaths (using both methods) are analyzed by a multidisciplinary working group. Systematic investigation includes gathering medical documentation from all health care providers of deceased women. The working group then analyzes all the circumstances of each death, assigns the cause of death and assesses preventability. Based on the findings, a report is prepared every three years including recommendations for health sector and community actions.

Title (Original Language): Spremljanje maternalne umrljivosti
v Sloveniji

Abstract description (Original Language):

Ker maternalne smrti v Sloveniji niso prijavljive, uporabljamo več metod, da se izognemo napacni klasifikaciji in podcenjenosti stopnje maternalne umrljivosti. Identifikacija smrti, ki so povezane z nosečnostjo

Engender Database extract

temelji na pregledu zdravniških potrdil o vzroku smrti za vse ženske, ki umrejo v rodni dobi ter racunalniškem povezovanju relevantnih zbirk podatkov. Vse identificirane smrti so v nadaljevanju analizirane v okviru multidisciplinarne delovne skupine. Sistematična obravnava primera vključuje zbiranje dokumentacije od izvajalcev zdravstvenega varstva pokojne ženske, analizo vseh okoliščin smrti, določitev vzroka smrti in oceno preprecljivosti. Na podlagi ugotovitev se vsake tri leta priprav

i poročilo s priporočili za klinične in javnozdravstvene ukrepe.

Keywords: health care, perinatal care, maternal mortality
