Title (EN): European Community Household Panel on Physical and Mental Health Problems, Illnesses and Disabilities measure of physical health

Engender Database extract

Abstract description (EN):

This study employs data from the European Community Household Panel for the years 1994-2002 across 13 European countries, using the Physical and Mental Health Problems, Illnesses and Disabilities measure of physical health.

Some socioeconomic status indicators do impact on the length of time an individual remains in good health - these being unemployment, which has a negative effect, and education, which has a positive effect - but others, such as income, have far less of an impact. Age and gender effects are also found.

Keywords: Education; European Union; Health duration; Unemployment
