Guidelines for gender equality
programmes in science

Engender Database extract

Abstract description (EN):

The "Guidelines for Gender Equality Programmes in Science" are based on a complex work of collection and assessment of practices developed in Europe, North America and Australia, resulting in a database of gender equality programmes in science and technology that is available on the Web. This overview will make it easier to capitalise on the theoretical and practical knowledge available on how to promote gender equality in science and technology. The Guidelines will thus be useful for universities, research centres and other stakeholders to implement a new institutional cultural change for a greater inclusiveness of women scientists, and the improvement of the working conditions of women (and men) on their premises. These Guidelines will be also useful in achieving our ultimate objective: to make the differences and peculiarities of male and female researchers the main strength of the European Research Area, the source of creativity and innovativeness.

Keywords: Gender equality, science, women
